

**Knowledge of Concepts in
 Critical Thinking
 Passport Proficiency Criteria**

Critical thinking is a cross-disciplinary process based on information literacy that uses inquiry and analysis, and leads to problem solving. Critical thinking is also a habit of mind characterized by the comprehensive exploration of issues, ideas, artifacts, and events before accepting or formulating a judgment or conclusion. Critical thinkers deeply reflect on the process and each of the steps below and return to each step as necessary.

Passport Learning Outcome Feature	Passport Learning Outcomes (what the student has learned)	Transfer Level Proficiency Criteria (Evidence of proficiency at the transfer level) Students demonstrate proficiency through successful completion of course assignments and exercises such as the ones below. These are examples of proficiency criteria only, not requirements. Sample activities come from different disciplines, may span multiple learning outcomes, and cover a range of formats (written, oral, visual, performative, individual, group).
Problem Setting	Identify a problem or question and its component parts.	Students state, describe, and clarify an open ended problem/issue appropriate to the discipline. Examples include the following: <ol style="list-style-type: none"> a. Age of Responsibility: Students identify different perspectives on how age might influence legal or ethical responsibility. b. The Problem of Justice: Students will identify and evaluate several different views and perspectives of justice in Plato’s Republic, Book 1. c. Business Ethics Case Study: Student will identify what decisions a corporation might consider about producing snack foods made with trans fats.
Recognize Assumptions	Recognize and assess personal and other relevant underlying assumptions.	Students engage with resources, ideas, problems, or questions to investigate and/or explain the role biases have in shaping point of view, analysis, and conclusions. Through this discovery students are able to examine and interpret their findings. Examples include the following: <ol style="list-style-type: none"> a. Students write an exploratory essay, identifying different points of view from different sources on a policy issue, explaining how their reaction to proposed solutions to the problem changed during the research process. b. Students identify a TED Talk of interest and assess the speaker’s assumptions and how they compare and/or differ from their own. c. Students select an event they believe has the

		<p>qualities of an “apocalypse” (i.e., The Dust Bowl, Three-Mile Island, the reintroduction of wolves into Oregon, etc.), explaining how their personal priorities influenced their choice while predicting the consequences of the event on individuals, communities, and environment.</p>
<p align="center">Evidence</p>	<p>Identify, gather, and analyze the information/data necessary to address the problem or question.</p>	<p>Students gather an appropriate scope and depth of evidence sufficient to address a question. Examples include the following:</p> <ol style="list-style-type: none"> a. Students quote and appropriately cite one or two passages that provide evidence for their thesis. Additionally, identify one or two passages that are still logically relevant but not quite as strong. b. After choosing a current event of global interest, students gather reports of the event from local, regional, national, and international sources; examine the evidence as reported from the various source for levels of strength; make reasoned judgments about the reliability of the reports; and report their own conclusions about the event in an essay or presentation, commenting on reasons for accepting particular pieces of evidence in their argument. c. Students develop an annotated bibliography of self-selected materials and a summary viewpoint that directly addresses how evidence does or does not support a particular argument.
<p align="center">Evaluate</p>	<p>Evaluate information/data for credibility (e.g. bias, reliability, validity) and relevance to a situation.</p>	<p>Students demonstrate skills as evaluators in addition to awareness of the evaluation process. Examples include the following:</p> <ol style="list-style-type: none"> a. Students differentiate relevant from irrelevant information as it pertains to a question of interest; an example assignment may deliberately provide students with thematically related but irrelevant

These are examples of proficiency criteria only, not requirements. Sample activities come from different disciplines, may span multiple learning outcomes, and cover a range of formats (written, oral, visual, performative, individual, group).
		<p>information (cf., heroin user recidivism rates as it might pertain to the success of an alcohol treatment center) to assess an ability to distinguish fact from judgment, and belief from knowledge; to use elementary inductive and deductive processes; and to recognize common logical errors or fallacies of language and thought.</p> <ul style="list-style-type: none"> b. Students identify logical fallacies within an argument contained in a prompt or original materials. c. Students assess and defend the credibility of each piece of data when analyzing an experiment, including some data and excluding other data in order to evaluate findings and reach a legitimate conclusion.
Context	Identify relevant (disciplinary) context(s) including, as appropriate, principles, criteria, concepts, values, histories, and theories.	Students clarify the significance of the context/environment in which the problem, event, and/or issue exists, interpreted or is perceived. Context may include temporal, disciplinary, historical, social, and physical considerations. Examples include the following: <ul style="list-style-type: none"> a. Business Case Study: Students develop criteria and utilize appropriate principles/concepts for comparing multiple courses of action in support of a conclusion or decision. b. Fictional Memoir or Profile: Students conduct historical and cultural research in order to craft a fictional memoir or profile of a person who could have lived in a specific historical time period (e.g. Pre-Revolutionary War). Students take up their research for this project by focusing on a particular cultural, political, and/or economic context. c. Historical Artifact Analysis: Students write an analysis of non-literary historical artifacts, explaining their physical and social

		contexts and significance. d. Students participate in a forum discussion explaining how time, place, and circumstances persuaded them to take some kind of significant, personal action.
Reasoning/Conclusion	Develop logical conclusions, solutions, and outcomes that reflect an informed, well-reasoned evaluation.	Students employ appropriate reasoning processes to reach a valid conclusion supported by relevant data. Examples include the following: <ol style="list-style-type: none"> a. Students develop a recommendation on the most effective way to reduce the incarceration rate in the state for illegal drug abuse. b. Students write a conclusion based upon lab reports that deal with the extraction of microbes from local soil that potentially may have antibiotic properties. They should restate their hypothesis, describe the support or rejection of their hypothesis, evaluate experimental data, synthesize what they would like to improve or perform for further experimentations, and explain how their work adds or compares to scientific work that has been previously reported. c. Students develop and communicate conclusions based upon self assessment (reflection) on the recursive reading, reasoning, and writing process in order to improve the quality of the exposition or argument.
